Tracker for Inventory and Profit

Bisuela, Jason John
Dela Cruz, Benedict John

Ollaban, Isabela Cristie
Olmedo, Kyle Dominic

INTRODUCTION

In today's business climate, efficient profit and loss management and inventory management are crucial for the sustainability of a business.

From the study regarding accounting practices on sari-sari stores, published in October 2018, the majority of the respondents favored **manual methods to bookkeep over computerized ones** because:

- Low Cost
- Ease of Use

Some business owners track the inventory of their products through mental footnotes and paper which could be **susceptible to error** and could lead to a situation where the product is unavailable when it is in demand, among other problems that arise with poor product tracking.

This will lead the owners to **make poor decisions for their business.**

PROBLEM STATEMENT

PROBLEM STATEMENT

Some small business owners could have difficulty tracking the inventory of their products since they could use more sophisticated methods which could be prone to error such as writing it in paper or mental footnotes.

PROBLEM STATEMENT

They also could have a difficulty in checking if their products are making a profit since they may use calculations or in some cases, they won't check for profits and feel if they're making a profit.

PROBLEM STATEMENT

There is a need for a system that could track inventory of items and check for the total revenue, cost, and profit gained from the products to check if the store is making profit or bleeding money.

SOLUTION

SOLUTION

TIP is a program that makes bookkeeping software friendly to sole proprietors that want to start a business with a sari-sari store.

SOLUTION

The goal of this project is to simplify the calculation process of net profit/loss for the sole proprietor and help track the current inventory of the products being sold in a sari-sari store.

SOLUTION

The calculations of profit/loss can be done erroneously, especially if not done properly, hence this program, alongside its goals to store and track inventory, help keep the numerical data reflective of the store's current financial position.

As for the inventory, a periodic inventory system will be observed for uniformity.

SDG 8: SUSTAINABLE ECONOMIC GROWTH

Since TIP aims to help micro and small enterprises in bookkeeping, it helps with the 8th Sustainable development goal of United Nations. By easing the work of these micro and small enterprises, their economic impact can be positively affected.
